PROFILE

Automation engineer building production business systems at Facon. I design end-to-end n8n workflows, custom Model Context Protocol servers that give AI agents real access to external services, and the applications around them: a PostgreSQL-backed helpdesk, webhook-served dashboards, and cross-platform desktop apps.

EXPERIENCE

Automation Engineer — Facon

Production systems

- Design and maintain end-to-end workflows that replace manual data entry across Amazon, Odoo, Gmail and Google Sheets.
- Build custom JavaScript transformations and API integrations (REST, webhooks, OAuth2) where native connectors fall short.
- Add error handling with Slack and email alerts; investigate failed executions and keep deployed workflows healthy.
- Migrated workflows from Zapier to self-hosted n8n to cut software costs; integrated OpenAI for content and support categorisation.

SELECTED SYSTEMS

MorrowDesk — helpdesk platform

n8n · PostgreSQL · Next.js · Tauri

Production customer-support app with authentication, role-based access, admin tools and SMTP/IMAP email processing including MIME and inline images.

Social media MCP servers

MCP · n8n · OAuth2

MCP servers connecting AI agents to YouTube, Instagram, Facebook and Pinterest; the Pinterest server exposes 19 callable tools.

Executive & inventory dashboards

n8n · Odoo · Sheets API

Webhook workflows that merge Odoo and multi-warehouse sheet data, compute KPIs and return a live HTML dashboard.

Amazon operations (eDesk, Master FBA Agent)

n8n · Gmail · Odoo

Buyer-message pipeline with Odoo enrichment and deduplication, plus a multi-workflow FBA inventory and shipment system.

FlowCore Leads

Tauri 2 · Rust · GitHub Actions

Lead-finder app shipped from one codebase to web, Windows, macOS, Linux and Android via automated CI releases.

EARLIER PROJECTS

- **E-commerce sync** — Shopify/WooCommerce to Xero/QuickBooks invoicing and inventory with Make.com.
- **API bridge** — n8n middleware linking two legacy apps with no native integration.
- **Data pipeline & chatbot backend** — Python scraping into SQL; Airtable + OpenAI conversation memory.

SKILLS

Automation

n8n (self-hosted & cloud),
Make.com, Zapier

AI

MCP servers, OpenAI, Claude,
vector databases

Integration

REST, webhooks, OAuth2, GraphQL,
SMTP/IMAP

Code

JavaScript, Python, Next.js,
HTML/CSS, Tauri

Data

PostgreSQL, MongoDB, Airtable,
Google Sheets, Odoo

Infrastructure

Docker, Linux VPS, Git, GitHub
Actions

STRENGTHS

System design, debugging
production failures, turning vague
processes into reliable automations,
explaining technical work to non-
technical teams.

EDUCATION

Class 10, Sindh Board

A grade · 801 marks

Self-taught in automation, APIs and
AI tooling through documentation
and hands-on production work.

AVAILABILITY

Freelance, contract and full-time
remote roles.
